We have a large greenhouse kit selection that can meet your individual growing needs!

Greenhouses, etc., provides a large variety of popular greenhouse kits that are not only practical and efficient, but also fit into every ones budget. Many of these affordable greenhouses can be customized in various ways to meet particular individual needs and to optimize your growing experience. Our selective range of kits allows you to choose from top of the line quality styles in affordable price ranges. If you have any questions, please give us a call or send us an e-mail and we will be glad to help, or simply browse through our site.

Planning Tips

After you decide which greenhouse you want, you will need to determine where you are going to put it. The first choice for a site should be on the south or southeast side of the house in a sunny location. The east side is the second best location. That's where it will capture the most November to February sunlight.

Some plants will grow in a greenhouse in any location. African violets and orchids, for example, will grow with northern exposure - but heating costs will be high. You will limit the types of plants you can grow if you don't put your structure in the best possible location. Sometimes you can place a structure against a door, window, or basement entrance of your house. This will let you use heat from your house to grow plants and make your structure more accessible.

If you are planning for a greenhouse browse our informational pages or just 'click' on [this link](#) to find some good information on where to start.

Happy Gardening...
